

ECL CIVIL ENGINEERING

BUILDING FOR THE FUTURE

ECL, self-delivering civil engineering for the homes and businesses of tomorrow.

**BUILDING
COMMUNITIES**

**ENHANCING
BIODIVERSITY**

**REDUCING
OUR CARBON
IMPACT**

ABOUT ECL

ECL Civil Engineering is one of the most comprehensive civil engineering and groundworks companies in the Bedfordshire area, with a portfolio encompassing site developments, water systems and transport networks.

Working alongside the U.K.'s most prominent housing developers, we have become highly adept in supporting large-scale residential-led strategic sites, providing self-delivery civil engineering, infrastructure and groundwork solutions that reduce risk and increase on-site efficiency.

PARTNERS WITH URBAN&CIVIC

And in doing so, we've forged a strong collaborative working relationship with Urban&Civic (the master planners of the Middlebeck development). A partnership reinforced with a mutual drive to form and nurture modern communities and enhance biodiversity and well-being whilst minimising our carbon impact.

We are working with Urban&Civic on a number of projects, and we are confident as the contractor that we can deliver high-quality construction solutions while securing the local community's welfare and safety.

WHAT'S HAPPENING ON-SITE

At the start of the month, we established the site compound, which is now situated on the east side of Staple Lane opposite Jericho Road. Within the compound, a solar pod has been installed to reduce our carbon emissions through solar energy and optimised power usage management.

Our works to Staple Lane commenced on the 21st August and will run through until November 2024. We have begun work at the west side of the junction to Jericho Road and will continue down Staple Lane. This road will be completely closed for the duration of the project, and this will also include the footpaths. Therefore, for safety, there will be no pedestrian or cyclist access allowed within this area. Diversion routes for pedestrians and cyclists have been circulated.

OUR COMMUNITY SUPPORT

We have an invested interest in how the built, natural and social environments are connected. Our community engagement programme empowers us to use our expertise and resources to support the local communities we serve.

Our priority is to ensure that the projects we co-create and solutions we deliver provide lasting value to communities.

OUR CARBON ZERO AMBITION

Our focus is to have a net zero carbon footprint by 2035, exceeding the U.K. government's ambition.

In July 2023, our annual CCF Report showed an outstanding reduction of 19% of the company's overall carbon emissions.

This is evidence of the excellent work and progress the company has made by taking significant environmental measures to reduce our footprint.
